

Business Values of CI/CD

2021/04/10

1. Time-to-Market

- ❖ It can be achieved delivering your product to market in time.
- ❖ Customer can use product in short time.
- ❖ It can be increased your business profits.

2. Cost Effective

- ❖ Using a CI/CD limits the potential impact and loss . It means a deployment problem can cause by allowing it to be deployed in non-critical business hours.
- ❖ Repeated automated deployments during the development phase help developers catch the errors early before causing any significant damage.

3. Reduces Defects

- ❖ Incorporating CI/CD into your company's development process minimizes the number of critical and non-critical defects in your product. These small defects are identified before production and fixed before the release.
- ❖ Your developers have sufficient time to focus on huge issues and enhancing the system. Testers can concentrate less on small issues so they can identify big problems before the release.

Thank You
